Dear Mr. Kosakowski:

I called last week to see if you knew what the status was on the core material recently analyzed on peat from the contaminated bog at the Reilly Tar site and from an adjacent uncontaminated peat bog. Dr. Brown thought that these analyses should have been available early in January. I talked to Rick Ferguson and he was not aware that these samples had been taken. If you know who is doing the sampling and analysis, please make sure that we get a copy as soon as the report on these samples is available. If you have any questions about this feel free to call me at (713) 693-8716.

Thank you.

Sincerely,

Beth D. Frentrup
